# Getting Started

## Setup Terraform

- Install Terraform on Mac

```
brew install tfenv

tfenv list-remote

tfenv install 0.11.14
```

- Make sure you can run the following terraform command on your machine successfully

```
terraform -v
```

Ensure it is 0.11.14

## Setup AWS

- Browse to ~/.aws directory and setup config and credentials file like below

  - config

```
[default]
region = ap-south-1
output = json
```

  - credentials

```
[default]
aws_access_key_id =  AKIASOH5U4UUBUZNUMSP
aws_secret_access_key = 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
```

- Use following url to access AWS Console `https://xkapil.signin.aws.amazon.com/console`

  uname/pwd - salesforce/salesforce

- Unzip the file provided along with the presentation, and open it up in your favourite text editor.
